

Percentage of girls and women aged 15-49 who have undergone FGM in Africa, the Middle East, and Indonesia

Notes: In Liberia, girls and women who have heard of the Sande society were asked whether they were members; this provides indirect information on FGM since it is performed during initiation into the society. Data for Indonesia refer to girls aged 0 to 11 years since prevalence data on FGM among girls and women aged 15 to 49 years is not available. Source: UNICEF global databases, 2016, based on DHS, MICS and other nationally representative surveys, 2004-2015. [Map disclaimer](#)
